UEH - Universal Exchange Adapters

Survivability-First Exchange Connectivity Infrastructure (Austere Commercial Whitepaper)

Version: 2026-02-04 | Contact: ueh.enterprise@gmail.com

---

1. What is UEH?

UEH (Universal Exchange Adapters) is an exchange connectivity infrastructure package designed for survivability-first operation under real-world exchange and network failure conditions. UEH is not a trading bot product. UEH is a boundary-controlled operational delivery system.

2. Core Principle

UEH does not provide:

- custody services
- trading strategies
- public distribution of execution modules
- performance guarantees

UEH provides:

- boundary-enforced delivery (controlled access and release policy)
- exchange constraints schemas (risk gates, limits, kill-switch requirements)
- survivability-focused ops templates (shutdown, recovery, incident discipline)
- commercial integration protocol (request -> ack -> payment -> grant -> delivery -> tag -> manifest)

3. Public vs Commercial Boundary

Public Core (Research / Demo Only)

- market-data connectivity demos
- adapter abstraction layer
- risk scans / survivability proofs
- NO execution modules (NO-EXEC)

Private Heart (Commercial Delivery)

- exchange constraints packs (per venue)
- ops shutdown / recovery protocols
- incident and go/no-go templates
- enterprise coordinator integration (contract scope)

4. Delivery Model (Controlled)

Commercial delivery follows a fixed boundary protocol:

Request -> Boundary Acknowledgement -> Payment -> Grant -> Delivery -> Tag -> Manifest

Delivery begins only after boundary acknowledgement and payment confirmation.

5. Supported Exchanges (Public Proof Demos, NO-EXEC)

Public proof demos are market-data only and contain no execution modules. Commercial constraints packs are available privately.

- Bybit (market-data demo)
- bitFlyer Japan (market-data demo)
- MEXC Global (market-data demo)
- Binance Japan (market-data demo)
- Coincheck Japan (market-data demo)
- OKCoin Japan (market-data demo / OKX-style proof path)
- Bitget (ticker-only proof demo)

6. Commercial Packages

- Ops Pack License - USD 499 (one-time)
- Ops + Config Bundle - USD 999 (one-time)
- Extended Support - USD 299/month (optional)
- Enterprise integration contracts available separately (scope-based)

7. Compliance Position

UEH is designed for infrastructure teams requiring no custody exposure, no execution exposure in public distribution, survivability-first operational discipline, and controlled delivery boundaries.
